70) Plot the following points in the coordinate plane.
(0,-4), (5,2), (-3, 0), (-5,-3)

Find the distance between the two points.

71) $(-4, -2), (-5, -3)$
72) $(6, 7), (11, -8)$

Find the midpoint of the line segment with the given endpoints.

73) $(2, 10), (-2, -7)$

74) $(-14, 13), (3, -9)$

Graph each equation by creating a table of values and plotting the points.

75) $y = -|x + 1| + 3$

76) $y = \sqrt{x + 5}$
